Dear all,

HW3-Q3, it should be read as:

This question is for those who wish to choose Option 3 for their grading. You will repeat what you did in Question 2.1, except that you don't preserve header information. You need to show the working of your program by creating shares of an image and showing the image shares and the reconstructed image as output. You can use the same BMP image that was used in Que 2.1.

It has been updated on BB.

Regards,

- Pradeep
